

1. Problem Description: Global Travel & Tourism Agency

A global travel and tourism agency helps clients book flights and hotel stays.

- The agency has a list of **Clients**. Each client has a unique Client ID, Full Name, Nationality, Passport Number, and Email.
- The agency's operations are managed through local **Branches**. Each branch has a unique Branch ID, Branch Name, and Location (City, Country).
- The agency has **Employees** (Travel Agents). Each employee has an Employee ID, Full Name, Position, and Hire Date.
- Each employee is assigned to one branch. Each branch has one Manager (who is also an employee).
- The agency partners with **Airlines**. Each airline has an Airline Code (e.g., EGY, UAE), and Name.
- The agency also partners with **Hotels** in different cities. Each hotel has a unique Hotel ID, Name, Star Rating, City, and Country.
- The core service is creating **Bookings** for clients. Each booking has a unique Booking Reference Number, Booking Date, Total Cost, and Trip Dates.
- Each booking is made by one specific client, managed by one specific branch, and paid for by one **Payment Method** which has Payment id, method name, and a payment date.
- A single booking can include one **Flight** (with a specific airline) and one **Hotel** stay. For simplicity, we assume one flight and one hotel per booking.
